

Component Storage conditions

- Non-MSL components:
 - Humidity/ temperature-controlled environment.
 - 30°C or lower, humidity levels < 60% RH.
- Moisture sensitive components:
 - Store in oven, humidity levels lower than 30% RH.
- Solder paste:
 - Store in fridge (2~8 degree C) as per datasheet specifications.
 - Maintain the viscosity of the solder paste.
 - Prevent the spheres of solder from settling to the bottom of the container.
